PROFESSIONAL SUMMARY

AI/ML engineer who independently conceives, builds, and ships full-stack AI products end-to-end — from architecture and data pipelines to UI, payments, and deployment. Four self-directed production products live (CareerHQ, Search.ai, SmartDialer, Automate X AI), each involving solo product decisions on scope, monetization, and infrastructure — equivalent in ownership to early-stage 0-to-1 building. Deep GenAI stack: RAG pipelines, embeddings/vector retrieval, multi-agent orchestration (LangGraph), MCP tool/function calling, and LLM evaluation (RAGAS, DeepEval, Langfuse). Comfortable across the Python ML stack (NumPy, Pandas, PyTorch) and full-stack web (React, TypeScript, FastAPI). Hands-on with OpenAI, Gemini, Claude, and Groq APIs in production. Remote-experienced, having delivered production features fully remote for a fintech startup.

INDEPENDENT PRODUCT BUILDER

- **Designed, built, and deployed 4 full-stack AI products solo** — CareerHQ and Search.ai are live in production with real users, payments, and auth — each shipped through the full cycle of scoping, building, monetizing, and iterating without a team, owning every product decision end-to-end (feature prioritization, AI provider/cost tradeoffs, infrastructure).

EXPERIENCE

Software Engineer Intern — Bluestock (Fintech Startup) — Jun 2025 – Aug 2025

Remote

- Delivered 8+ production-ready features for a financial analytics platform, working fully remote in a fast-moving startup environment — shipping independently against sprint goals with minimal oversight.
- Engineered Snowflake ETL pipelines processing 4 TB of data weekly, reducing query times by 40%.
- Integrated Jenkins CI/CD, AWS Lambda for real-time data ingestion, and automated Shell scripts for job scheduling — reducing manual ETL interventions by 70%.

Machine Learning Intern — Sigma TechAI — Mar 2025 – May 2025

Delhi

- Designed and deployed end-to-end ML pipelines (classification/forecasting) on AWS S3, Glue, and Kafka, achieving 85% predictive accuracy (12% above baseline); automated ETL workflows processing 500+ records/day with zero manual intervention.
- Integrated Apache Kafka for real-time event-driven streaming, reducing data processing lag by 30%; built stakeholder-facing dashboards using Tableau and Matplotlib.

PROJECTS — INDEPENDENTLY BUILT & SHIPPED

CareerHQ — React, TypeScript, Vite, Gemini API, Stripe, Resend, Netlify — *Live ↗ · GitHub ↗*

- Solo-built and launched a full-stack AI career platform (ATS Resume Analyzer, LaTeX Resume Builder, AI Cover Letter Generator, LinkedIn Optimizer, Job Recommendations) — owned the entire product lifecycle from scoping to a live paying-customer product.
- Designed prompt-engineered Gemini API workflows for classification, extraction, and generation; implemented a Stripe subscription flow and Resend transactional emails — real monetization infrastructure, not a demo.

Search.ai — Next.js, Supabase, Gemini/Groq, OpenRouter, Razorpay, Stripe — *GitHub ↗*

- Built a decision-intelligence platform with multi-engine AI routing — primary execution via Gemini/Groq with automatic fallback to OpenRouter (Claude/Llama) and local Ollama, a product-level reliability/cost decision made independently.
- Added Supabase auth (Google OAuth + magic link), dual payment gateways (Razorpay/Stripe) for market flexibility, and privacy-first analytics via PostHog.

Automate X AI — Python, FastAPI, LangGraph, MCP Architecture, Docker, SQL, Databricks — *GitHub ↗*

- Built a multi-agent AI automation system using LangGraph and MCP architecture, orchestrating multi-step business workflows with persistent memory, state management, and tool/function calling via FastAPI REST APIs, containerized with Docker.

SmartDialer — Python, FastAPI, SQLite, WebSocket, React — *GitHub ↗*

- Built a predictive/progressive call-pacing engine using EWMA-based answer-rate forecasting, a concurrent multi-worker architecture with optimistic concurrency control, and a real-time React dashboard streaming live call state over WebSocket.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript/JavaScript, SQL **LLM APIs:** OpenAI, Gemini, Claude, Groq, OpenRouter
- **GenAI:** RAG, Advanced RAG, Embeddings, Vector Search, LangChain, LangGraph, AI Agents, MCP, Prompt Engineering, Tool/Function Calling
- **AI/ML:** LLMs, Transformers, Hugging Face, PyTorch, NumPy, Pandas, Finetuning, LoRA/QLoRA
- **Full-Stack & Data:** React, Next.js, FastAPI, Pydantic, REST APIs, Async Python, Auth, Stripe/Razorpay, PostgreSQL, pgvector, Redis, Snowflake
- **LLMOps & Cloud/DevOps:** RAGAS, DeepEval, Langfuse, OpenTelemetry, AWS, Azure, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD

EDUCATION

Bachelor of Technology — Computer Science & Engineering — 2023 – 2027

Netaji Subhas University of Technology (NSUT), Delhi, India

- Coursework: DSA, OS, DBMS, Computer Networks, OOPs, System Design (HLD/LLD) • Cert: Microsoft Azure Fundamentals (AZ-900)
